PREFACE

The Medical Records office continues to provide key statistical information on the health status of the Cook Islands for the years of 2008, 2009 and 2010. This document is designed to provide in a convenient publication format the latest information on an annual basis. These statistics are presented as time series for the past five to ten years.

This is the results' of several years of dedication invested by all those involved, including the Outer Islands, in the compiling of once again this useful document. For the first time information contained in this report are mostly extracted from the Ministries electronic database MedTech32.

The information contained in this report will be used by the Ministry of Health (MOH) to assist in identifying public health needs, in formulating future plans and advise the Minister of Health on how needs should be addressed, and in assessing progress towards the health outcome targets.

We believe that this report will also be of interest to others, because it provides information that is needed to debate about health needs and priorities that will benefit the people of the Cook Islands. It also provides key health indicators for creating framework adopted for our planners both in the public and the private sectors.

It is our aim to ensure that government and the wider Community including International users, are provided with timely, reliable and quality health statistics.

For more detailed information or for information on subjects not dealt with or of individual interests, inquiry should be made through the Secretary of Health and the Director of Hospital Health Services.
